DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I (claims 1-14 and 24-34) in the reply filed on 01/27/06 is acknowledged.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the conductor having rectangular cross-section must be shown or the feature(s) canceled from the claims 5 and 28. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Art Unit: 2839

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-4, 6-14, 24-27 and 29-34 are rejected under 35 U.S.C. 102(b) as being anticipated by Di Giulio et al. (5242314).

Di Giulio (Figures 1-17) shows a harness having a flat flexible cable with a plurality of circular conductors 18a surrounded by an insulating covering 18b, a plurality of connectors with connection terminals 70 connecting to one of the conductors and a selected one of the conductors is cut by cutting wedges 110 such that connection terminals on two sides of the cut parts of conductors form different circuits. The insulating coverings 18b are joined together by a web 18c. The connection terminals have crimping parts 78. The harness has a connector housing 20 and a mold part 24 which seals the proximal ends of the terminals and cut parts. The mold part extends a greater distance than the housing and has grooves to flex the ends of the mold part. A

Art Unit: 2839

relay connector 10 is installed between two sides of the conductors. The housing has projections that are inserted in the cut.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 5 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Di Giulio et al. (5242314).

DiGuilio shows all the features of these claims except the conductors being rectangular. Such a feature is well known in the art electrical connectors. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to make the conductors rectangular because such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. In re Rose, 105 USPQ 237 (CCPA 1955).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Seko et al. (6273746), Kosugi et al. (4641904), Yamanashi et al. (20020009919), Kubota et al. (6832930).
